

This lakeside property was transformed from a steep, unusable slope, into a series of skillfully constructed stone terraces, and outdoor living spaces. The addition of creative landscape lighting extends enjoyment of the spaces into the evening hours.

We work closely with each client to make sure their specific landscape goals are met.

What sets db apart from the rest? Quality. We never cut corners and it shows in the final product.

db Landscaping LLC's environmentally sensitive designs will not only provide you with a more beautiful, functional, and valuable property, but will uphold the integrity of the native landscape.

This brick pathway with native plantings, makes this entry a pleasure to come home to.

An inviting front entry.

Who We Are

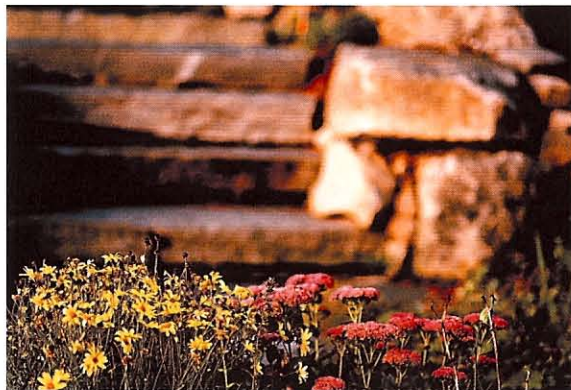

db Landscaping LLC was founded by Daniel Bruzga in 2000. Daniel holds degrees in both Landscape Architecture and Horticulture. db Landscaping LLC is committed to the principle of providing superior service throughout both design and construction of your project. We have two full-time landscape designers with undergraduate degrees in landscape architecture, and work integrally with our talented construction crew.

The db team consists of landscape designers, horticulturalists, and a premier construction crew of talented stonemasons and landscape professionals.

Our focus on quality and attention to detail ensures that the landscape we create for you will be long lasting in the New England environment.

Rustic and informal pathways tie your property together while maintaining a natural feel. These areas will grow more beautiful over time as plant material matures and the stone ages.

Knowledge, experience and teamwork

db Landscaping LLC has the knowledge and capability to lead your next project to success. If you're building a new home, plan ahead. The earlier our design professionals can get involved in your project, the greater the possibilities are. Our team can help you see opportunities that other design professionals may miss, whether it be saving a tree, planning a driveway, or grading the site for an informal pathway.

We collaborate with several other design professions including architects, engineers, environmental scientists, surveyors, and arborists to name a few, to ensure the success of your project. While db Landscaping LLC is often a team leader on projects, we welcome the opportunity to construct projects designed by others as well.

db Landscaping specializes in landscape design/build

We pride ourselves in constructing many of the projects that we design. Design/Build is a collaborative process of planning and creating your project by combining the often-separate industries of design and construction. The processes and communication between clients and designer/builder becomes more streamlined and cost effective. Design/Build also helps maintain the intent of the design, to accomplish the goals you help us determine, and allows the team to be responsive to opportunities that present themselves during construction. This is all accomplished through careful listening, observation, and communication.
